

Sink & Drain Foaming Cleanser

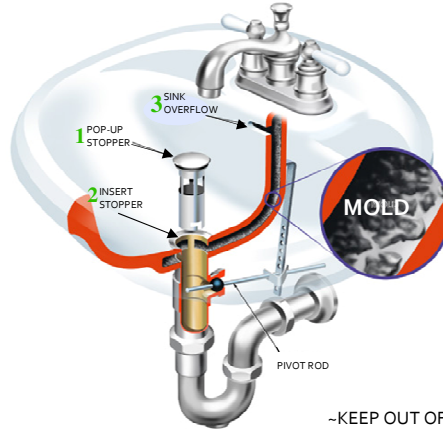

Mold and other bio-toxins grow inside a sink's overflow channel. Take care of your inner sink.

Botanically-based
Bio-balancing & Maintenance
Solution Concentrate

16 oz

Treatment: 1. Remove the sink's **pop-up stopper**. Either lift it straight up and out or turn it counter-clockwise and lift it out. If your sink is older, you may have to remove the pivot rod and assembly in order to remove the pop-up. 2. Plug the sink's **drain** by squeezing the gray foam pipe firmly into the drain. 3. Fill foaming pump bottle with CitriSafe for Sinks. 4. Insert tubing into the **sink overflow hole** as far as possible. 5. Pump CitriSafe for Sinks down the overflow channel until the foam comes out of the overflow holes. 6. Let set overnight. 7. Replace pop-up stopper and pivot rod (if it had to be removed).

Maintenance: If this is the first time you have cleaned the overflow channel, we suggest you repeat the process the next day and once-a-month thereafter. If anyone in your family has mold related health problems, bio-balance weekly.

-KEEP OUT OF REACH
OF CHILDREN-

Do not ingest. Avoid contact
with eyes. Use only as directed.

Ingredients: Filtered water, Surfactants, CitriSafe Botanical Blend™. No toxic chemicals.
